NEBRASKA WEEKLY WEATHER AND CROP REPORT

Release 11/1/65

Week Ending 11/1/65

WEATHER It was a warm, dry week with abundant sunshine. Temperatures averaged from four to eight degrees above normal.

CROPS Harvest of row crops advanced rapidly during the past week under favorable weather conditions. About 35 percent of the corn had been harvested at the close of the week, and while this was running behind the rate of a year earlier, it was close to the normal amount usually harvested at this date. There was nearly 75 percent of the sorghum combined, and soybean harvest was slightly over 80 percent completed. Yields of corn appear to be running above earlier expectations, and while the test weight of sorghum is on the low side, good yields are being obtained from many fields.

The rate of Harvest in the east central and southeast parts of the State is well advanced with most of the sorghum out of the fields in the southeast. Harvest is at a slower rate in the central and western areas where wet fields have delayed operations and moisture content of the grain has been running high.

Harvest of sugar beets picked up as soil dried sufficiently for clean operations. Most of the potatoes are now under cover.

Winter wheat made excellent growth with crown roots developing and sufficient top growth to protect fields from wind erosion this winter. There is an excellent supply of subsoil moisture under the current wheat crop.

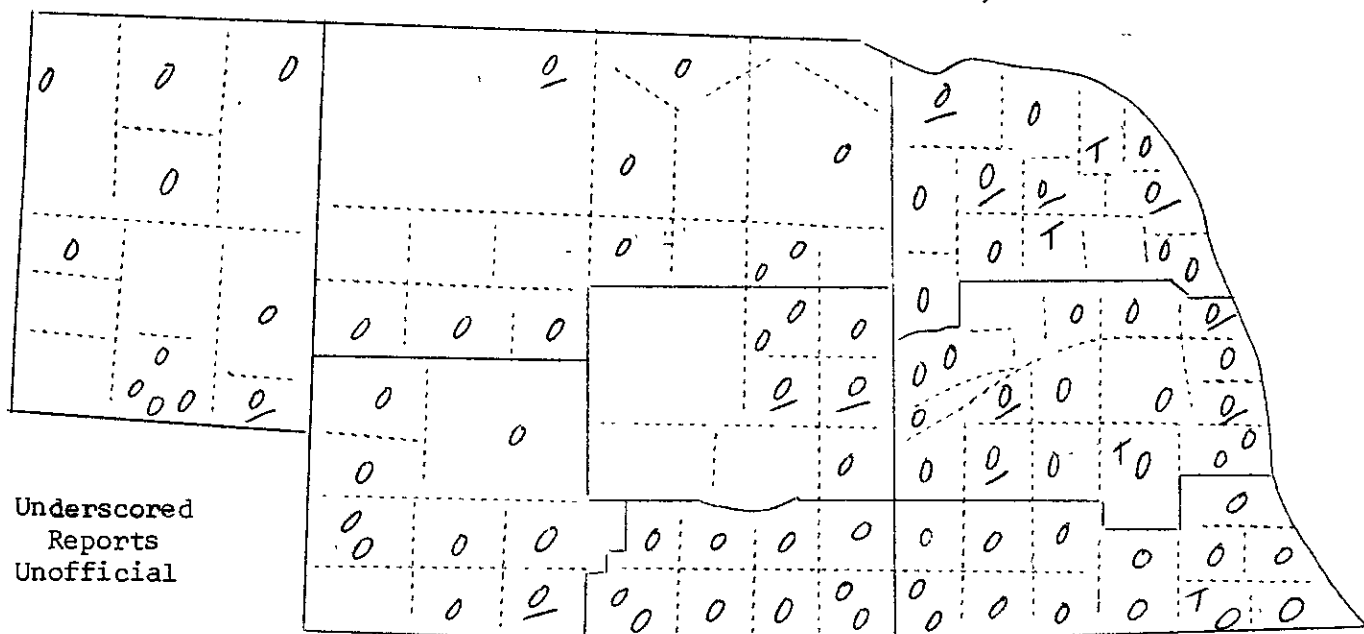

Forage feed supplies are abundant. Farmers are turning cattle in to glean fields as they complete the harvest of corn and sorghum. Fall plowing is now getting underway but top soil is becoming a little dry in the eastern part of the State.

LIVESTOCK All livestock continue in good condition under favorable weather. Demand for stocker and feeder cattle is picking up as farmers complete harvest operations. Feed lots are starting to fill and good gains are being reported. It has been a very favorable fall for late calving and for farrowing of sows. Good size litters are being reported with death losses at a low level.
